

World's Smallest Wall Mount

Date: Tuesday, 10 July 2007

Billed as 'compact, cute and incredibly strong', Omnimount's new Worldmount is touted as the world's smallest plasma mount.

Omnimount is renowned for its compact and discreet designs which help display your screen at any angle with the minimum of fuss, but its new 'WorldMount' series raises the bar even higher. *'This series is an extremely cost-effective yet superbly engineered solution for those seeking to easily and discreetly hang a slimline TV,'* said **Megan Haines**, of Convoy International, which distributes Omnimount in Australia.

All models in the WorldMount line use an innovative metal and polymer injection-moulded body that is exceptionally lightweight, yet able to safely support loads of up to 80 kilograms. The unique design enables a very low mounting profile, down to just 13mm (model-dependent), so in many cases, it will be difficult to see the mounting system behind the TV. Fingertip adjustment of your flat screen is a feature on most models, as is the company's proprietary Lift 'n' Lock technology for easy installation.

The series includes a full range of mounting solutions, from simple fixed mounts, to four-in-one mounts that offer maximum flexibility comprising tilt, swivel, pan and fixed options for the maximum viewing angles. Prices start at \$79 for the Vesa 75, increasing to \$249 for the Vesa 200 WM4-M.

For further information, please contact Convoy International on 1800 817 787 or visit the website at www.e-hifi.com.au

Omnimount's new WM4-M 'WorldMount' wall-mounting bracket sells for just \$249
