Monster SCART to Component Video Cable

Convoy International, the Australian distributor for Monster Cable, has released a high-quality SCART to Component Video Cable. *'Monster developed this new SCART to Component cable exclusively for Australian TV customers and we are very impressed with the picture quality,'* said **Geoff Matthews**, Marketing Director at Convoy International. *'We believe that with Monster's focus on performance, quality and value will carry this SCART to Component Cable into our big seller list very quickly.'*

One of the prime reasons for the development of the cable, according to Convoy, was that Foxtel and Austar boxes are equipped with SCART connectors, so consumers wanting to connect to their equipment require an adaptor cable. *'Consumers are aware that generic cables provide minimal performance and want enhanced connectivity to ensure optimum video and audio quality,'* says Matthews. The Monster SCART to Component Video Cable is constructed from a fine-strand centre-conductor, and it has the desirable characteristics of high conductivity, low signal loss, low resistance and good signal transmission. This cable also utilises Monster's high quality Video 2 grade video cable technology and all connections are made with 24-carat gold connectors to maximise signal transfer and resist corrosion. To ensure a tight fit, the cables are terminated in 8-cut turbine RCA plugs.

The MV2 SCART to Component cable also provides analogue audio connectors and a composite video connector. The cable sells for \$179 (RRP).
