

A Bridge II Far

harman/kardon has released the second version of its famous 'Bridge' iPod dock, which connects directly to most harman/kardon AVR receivers and allows you to use your AVR's remote to seamlessly select and play audio and video content—guided by on-screen or front-panel menus that can be read from across the room. With the sole exception of the Shuffle, the Bridge II works with any iPod model including the iPod Touch and the iPhone, and requires only a single connection to your harman/kardon AV receiver. Available now, the Bridge II has an RRP of \$129.

For further information, please contact Convoy International on 1800 817 787 or visit the website at www.e-hifi.com.au

Bridge II has wider iPod compatibility.
