

Now EAR this

With its low-profile design OmniMount's EAR series of mounts presents a neat way of mounting flat panel speakers flush to the screen of a flat panel TV. The EAR-S (\$199) attaches speakers weighing up to ten kilos each to either side of a flat panel TV, while the EAR-C (\$149) is designed to mount centre channel speakers and 'all-in-one' soundbar designs directly below your screen. They employ a mounting system that accommodates nearly all flat panel speakers on the market and which works with almost every medium and large flat panel screen, according to distributor, Convoy International, and there's no need to remove a screen from the wall in order to attach the speakers.

“Not only does OmniMount's EAR series fix loudspeakers flush to your screen for a smart and space-saving solution,” says Geoff Matthews, Marketing Director of Convoy International, “but this ideal positioning also ensures that sound and video always come from the same direction, no matter how you swivel your screen on the mount, delivering optimum performance every time.”

The CMK management system (\$76) is a neat complement to the EAR speaker mounts, the flat tube cover doing a good job of concealing all the power and speaker cables that run to a flat panel TV without the need to cut through a wall. It can be painted to match the wall colour, and with covers able to be cut to any length, accommodates any system configuration.
