

## An extra set of EARS

OmniMount has recently introduced its new EAR series — a neat, stylish and handy solution for your home cinema system installation.

The EAR-S series mounts lets you fix your loudspeakers flush to your screen. The low-profile mount is designed to attach centre channel speakers directly below your screen and is also an ideal partner for 'all-in-one' soundbar designs.

OmniMount says the designs are strong, with a capacity of almost 10kg each side and the EAR models are easy to install with a universal mounting system which accommodates nearly all flat panel speakers on the market. The EAR-S and the EAR-C are also compatible with OmniMount's UCL-L and UCL-X mounts, all UAM and UAL adapters and the G3FP flat panel stand.

The EAR-C retails for \$149 and EAR-S \$199. For more information, visit [www.omnimount.com](http://www.omnimount.com)
