

Mounting Brackets

An OmniMount For Your Home Cinema Systems

Mendelson Tiu - Friday, 21 December 2007

OmniMount provides users with a mounting solution for home cinema systems with its new Ear series.

According to OmniMount, the Ear-S offers a smart solution for mounting flat panel speakers flush to either side of your screen. The EAR-C is designed to mount centre channel speakers directly below your screen and is also an ideal partner for the profusion of 'all-in-one' soundbar designs. They have a tolerance of almost 10kg each side.

Marketing Director of Convoy International, Geoff Matthews said, "Not only does OmniMount's EAR series fix loudspeakers flush to your screen for a smart and space-saving solution. But this ideal positioning also ensures that sound and video always come from the same direction, no matter how you swivel your screen on the mount, delivering optimum performance every time."

The Ear models can accommodate nearly all flat panel speakers on the market and works with almost every medium and large flat panel screen. The Ear-S and the Ear-C are compatible with OmniMount's UCL-L and UCL-X mounts, all UAM and UAL adapters, and the G3FP flat panel stand.

The CMK is a simple and affordable alternative to running the cables through your wall. The modular design allows for any configuration with the covers being cut to the desired length.

The EAR-S, EAR-C and CMK are all available now with a recommended retail price of \$199, \$149 and \$76 respectively.
